

Attributes

Computer Vision

James Hays

Recap: Human Computation

- Active Learning: Let the classifier tell you where more annotation is needed.
- Human-in-the-loop recognition: Have a human and computer cooperate to do recognition.
- Mechanical Turk is powerful but noisy
 - Determine which workers are trustworthy
 - Find consensus over multiple annotators
 - “Gamify” your task to the degree possible

Recap: Recognition Data Sets

- SUN Scene Database
 - *Not* Crowdsourced, 397 (or 720) scene categories
- PASCAL VOC
 - *Not* Crowdsourced, bounding boxes, 20 categories.
- LabelMe (Overlaps with SUN)
 - Sort of Crowdsourced, Segmentations, Open ended
- SUN *Attribute* database (Overlaps with SUN)
 - Crowdsourced, 102 attributes for every scene
- ImageNet
 - Large, Crowdsourced, Hierarchical, *Iconic* objects
- COCO
 - Large, Crowdsourced, 80 segmented object categories in complex scenes

Today – Crowd enabled recognition

- Recognizing Object Attributes
- Recognizing Scene Attributes

Describing Objects by their Attributes

Ali Farhadi, Ian Endres,
Derek Hoiem, David Forsyth

CVPR 2009

What do we want to know about this object?

What do we want to know about this object?

Object recognition expert:
“Dog”

What do we want to know about this object?

Object recognition expert:
“Dog”

Person in the Scene:
“Big pointy teeth”, “Can move fast”, “Looks angry”

Our Goal: Infer Object Properties

Can I **poke with it**?

Can I **put stuff in it**?

What **shape** is it?

Is it **alive**?

Is it **soft**?

Does it have a **tail**?

Will it **blend**?

Why Infer Properties

1. We want detailed information about objects

“Dog”

vs.

“Large, angry animal with pointy teeth”

Why Infer Properties

2. We want to be able to infer something about unfamiliar objects

Familiar Objects

New Object

Why Infer Properties

2. We want to be able to infer something about unfamiliar objects

If we can infer category names...

Familiar Objects

Cat

Horse

Dog

New Object

???

Why Infer Properties

2. We want to be able to infer something about unfamiliar objects

If we can infer properties...

Familiar Objects

Has Stripes
Has Ears
Has Eyes
....

Has Four Legs
Has Mane
Has Tail
Has Snout
....

Brown
Muscular
Has Snout
....

New Object

Has Stripes (like cat)
Has Mane and Tail (like horse)
Has Snout (like horse and dog)

Why Infer Properties

3. We want to make comparisons between objects or categories

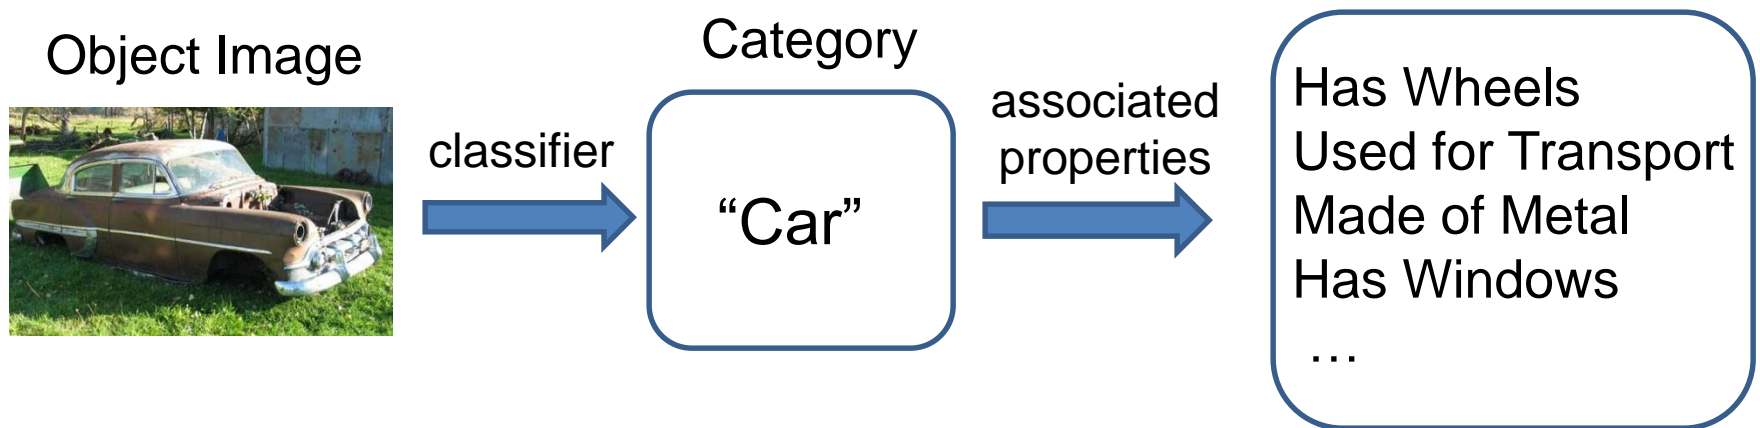

What is unusual about this dog?

What is the difference between horses and zebras?

Strategy 1: Category Recognition

Strategy 2: Exemplar Matching

Malisiewicz Efros 2008

Hays Efros 2008

Efros et al. 2003

Strategy 3: Infer Properties Directly

Object Image

classifier for each attribute

No Wheels

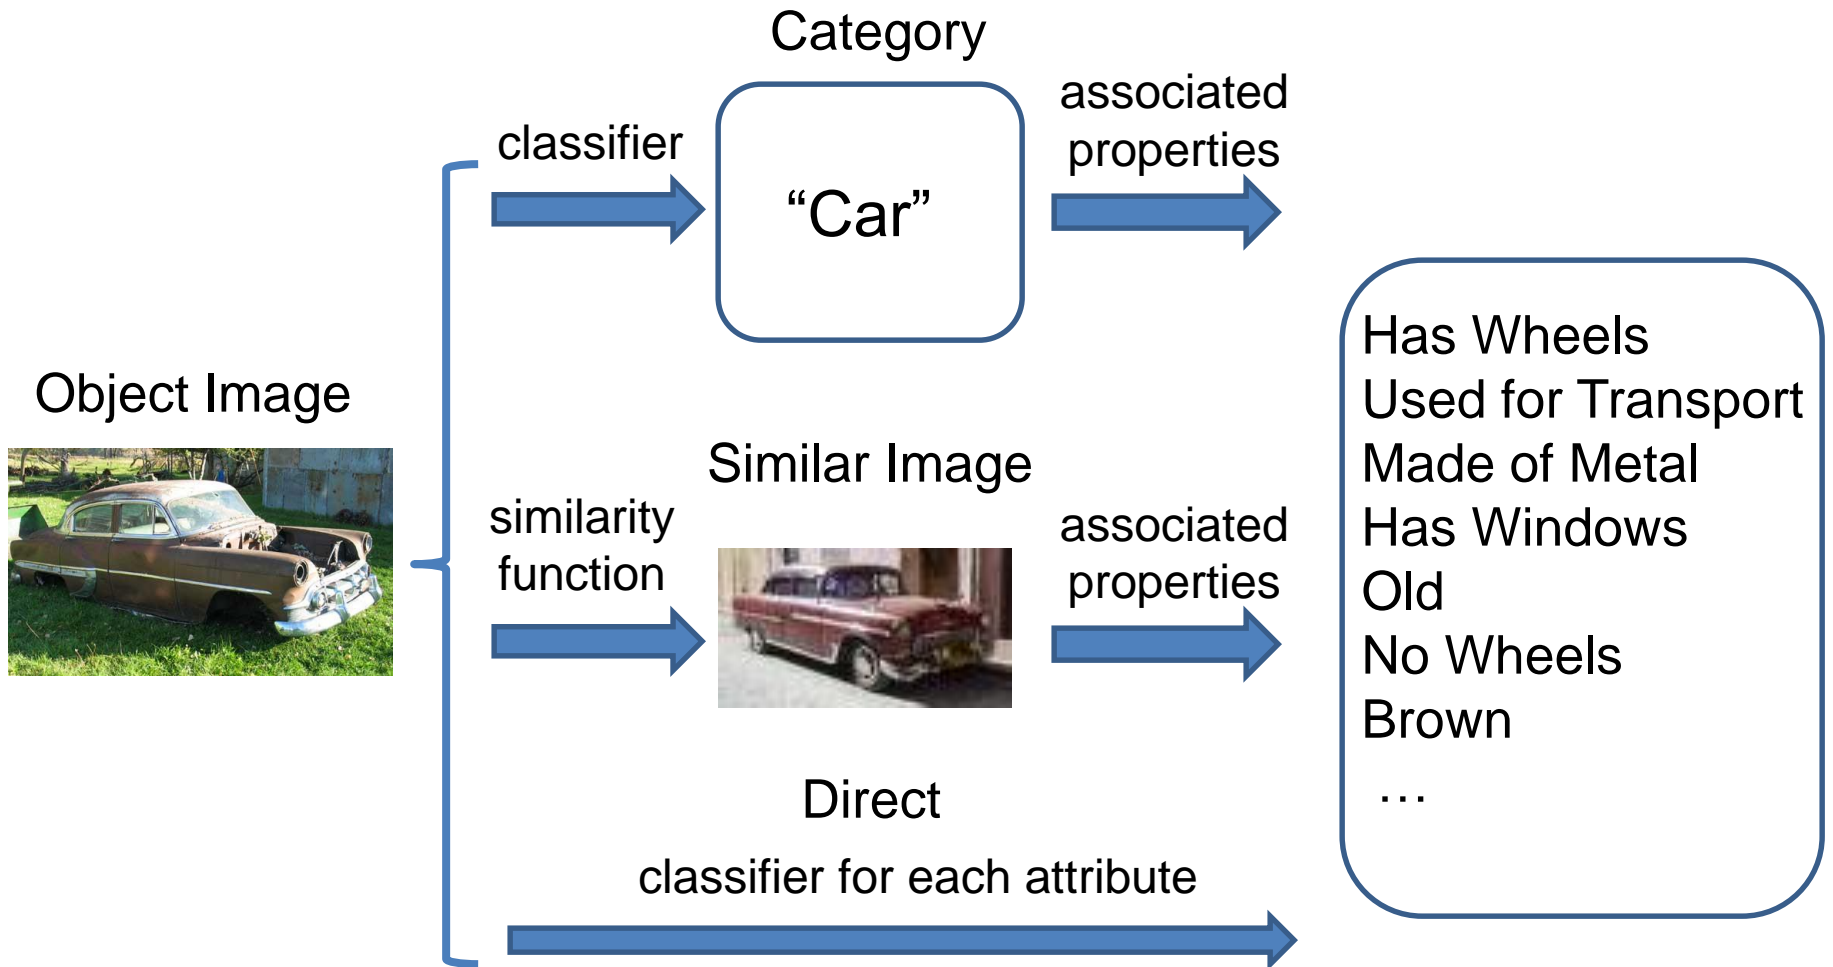

Old

Brown

Made of Metal

...

The Three Strategies

Our attributes

- Visible parts: “has wheels”, “has snout”, “has eyes”
- Visible materials or material properties: “made of metal”, “shiny”, “clear”, “made of plastic”
- Shape: “3D boxy”, “round”

Attribute Examples

Shape: Horizontal Cylinder
Part: Wing, Propeller, Window, *Wheel*
Material: *Metal*, Glass

Shape:
Part: Window, *Wheel*, Door, Headlight, Side Mirror
Material: *Metal*, Shiny

Attribute Examples

Shape:

Part: Head, Ear, Nose, Mouth, Hair, Face, Torso, Hand, Arm

Material: Skin, Cloth

Shape:

Part: Head, Ear, Snout, Eye

Material: Furry

Shape:

Part: Head, Ear, Snout, Eye, Torso, Leg

Material: Furry

Datasets

- a-Pascal
 - 20 categories from PASCAL 2008 trainval dataset (10K object images)
 - airplane, bicycle, bird, boat, bottle, bus, car, cat, chair, cow, dining table, dog, horse, motorbike, person, potted plant, sheep, sofa, train, tv monitor
 - Ground truth for 64 attributes
 - Annotation via Amazon's Mechanical Turk
- a-Yahoo
 - 12 new categories from Yahoo image search
 - bag, building, carriage, centaur, donkey, goat, jet ski, mug, monkey, statue of person, wolf, zebra
 - Categories chosen to share attributes with those in Pascal
- Attribute labels are somewhat ambiguous
 - Agreement among "experts" 84.3
 - Between experts and Turk labelers 81.4
 - Among Turk labelers 84.1

Annotation on Amazon Turk

Annotation interface for a cow image. The image shows a white cow in a field with a bounding box around it. The interface includes a list of attributes to be annotated, with checkboxes for each attribute. The attributes are organized into sections: Viewpoint, Context, Shape, Part, Material, and Pose. The word 'cow' is displayed at the top right of the interface.

cow	
-Viewpoint-	-Viewpoint-

Our approach

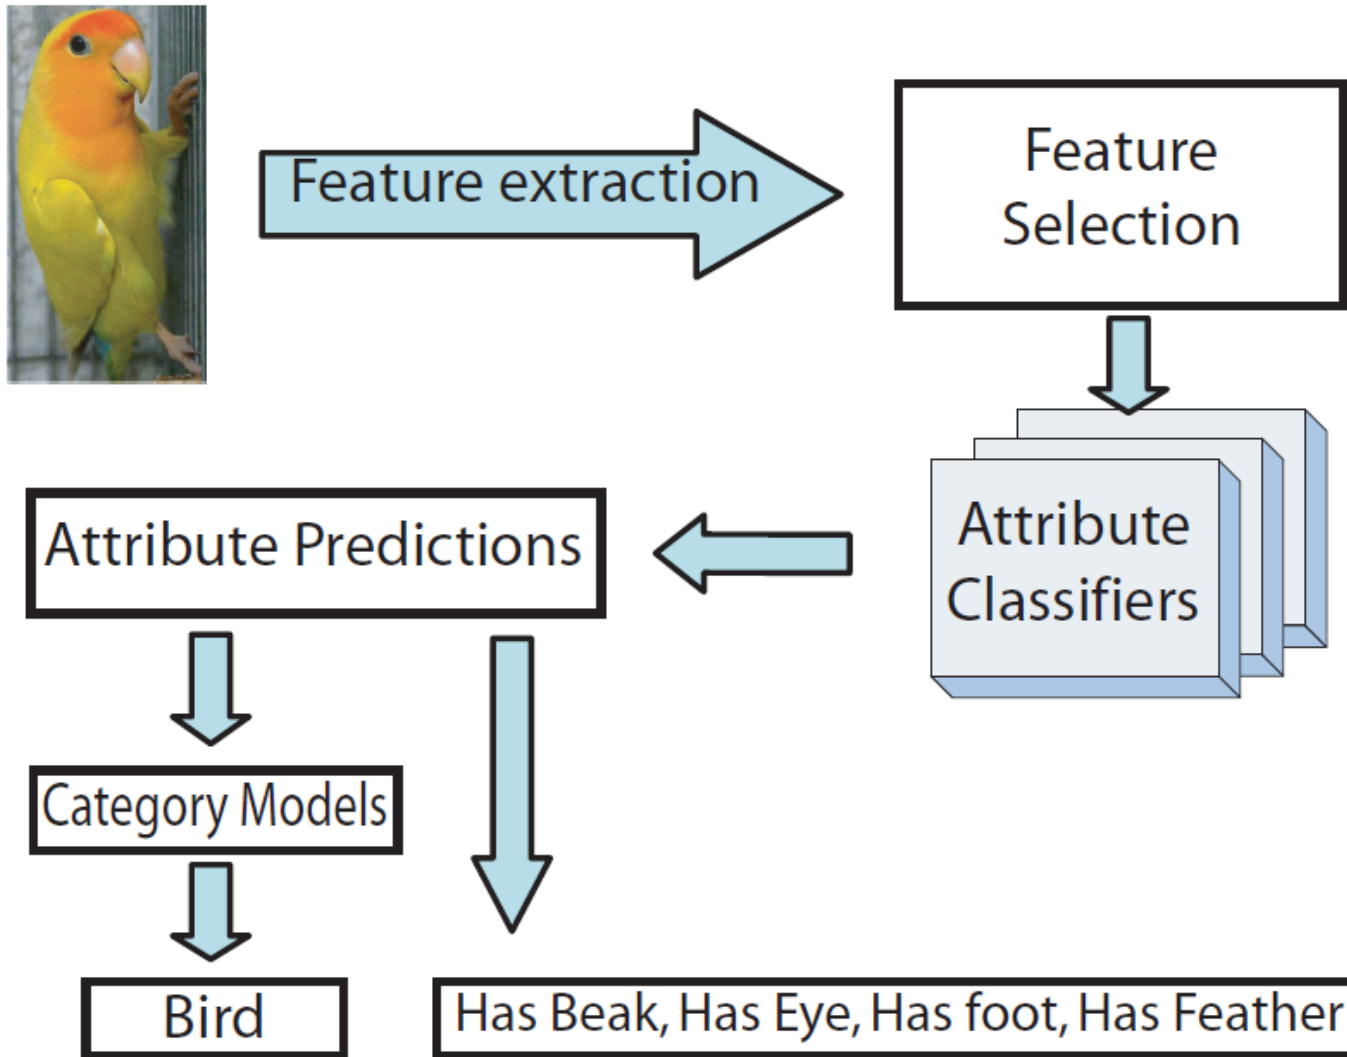

Features

Strategy: cover our bases

- Spatial pyramid histograms of quantized
 - Color and texture for **materials**
 - Histograms of gradients (HOG) for **parts**
 - Canny edges for **shape**

Our approach

Learning Attributes

- Learn to distinguish between things that have an attribute and things that do not
- Train one classifier (linear SVM) per attribute

Experiments

- Predict attributes for unfamiliar objects
- Identify what is unusual about an object

Describing Objects by their Attributes

'is 3D Boxy'

'is Vert Cylinder'

'has Window' **X**'has Screen'

'has Row Wind' 'has Plastic' **X**'has Saddle'

X'has Headlight'

'has Hand'

'has Arm'

'has Plastic' **X**'has Saddle'

'is Shiny'

'has Head'

'has Hair'

'has Face'

X'has Saddle'

'has Skin'

No examples from these object categories were seen during training

Describing Objects by their Attributes

' is 3D Boxy'
'has Wheel'
'has Window'
'is Round'
' has Torso'

'has Tail'
'has Snout'
'has Leg'
X 'has Text'
X 'has Plastic'

No examples from these object categories were seen during training

Average ROC Area

Trained on a-PASCAL objects

Test Objects	Parts	Materials	Shape
a-PASCAL	0.794	0.739	0.739
a-Yahoo	0.726	0.645	0.677

Our approach

Category Recognition

- Semantic attributes not enough
 - 74% accuracy even with ground truth attributes
- Introduce discriminative attributes
 - Trained by selecting subset of classes and features
 - Dogs vs. sheep using color
 - Cars and buses vs. motorbikes and bicycles using edges
 - Train 10,000 and select 1,000 most reliable, according to a validation set

Attributes not big help when sufficient data

- Use attribute predictions as features
- Train linear SVM to categorize objects

PASCAL 2008	Base Features	Semantic Attributes	All Attributes
Classification Accuracy	58.5%	54.6%	59.4%
Class-normalized Accuracy	35.5%	28.4%	37.7%

Identifying Unusual Attributes

- Look at predicted attributes that are not expected given class label

Absence of typical attributes

Aeroplane
No "wing"

Car
No "window"

Boat
No "sail"

Aeroplane
No "jet engine"

Motorbike
No "side mirror"

Car
No "door"

Sheep
No "wool"

752 reports

68% are correct

Presence of atypical attributes

Motorbike
"cloth"

People
"label"

Bird
"Leaf"

Bus
"face"

Aeroplane
"beak"

Sofa
"wheel"

Bike
"Horn"

951 reports

47% are correct

Today – Crowd enabled recognition

- Recognizing Object Attributes
- Recognizing Scene Attributes

Space of Scenes

Space of Scenes

A scatter plot showing the relative positions of various scenes in a 2D space. The scenes are represented by text labels. The labels are arranged in a roughly circular pattern, with 'Dentist's Office' on the far left and 'River' on the far right. The top of the plot contains 'Ice Cave', 'Cavern', and 'Forest'. The middle section includes 'Volcano', 'Savanna', 'Classroom', 'Village', and 'Beach'. The bottom section features 'Subway', 'Highway', 'Fountain', 'Canyon', 'Railroad', 'Canal', and 'River'.

Ice Cave

Cavern

Highway

Fountain

Canyon

Railroad

Big Picture

- Scenes don't fit neatly into categories.
 - Objects often do!
- Categories aren't expressive enough.
- We should reason about scene *attributes* instead of (or in addition to) scene categories.

Attribute-based Visual Understanding

polar bear

black: no
white: yes
brown: no
stripes: no
water: yes
eats fish: yes

zebra

black: yes
white: yes
brown: no
stripes: yes
water: no
eats fish: no

Learning To Detect Unseen Object Classes by Between-Class Attribute Transfer.

Lampert, Nickisch, and Harmeling. CVPR 2009.

Describing Objects by their Attributes.

Farhadi, Endres, Hoiem, Forsyth. CVPR 2009.

Attribute and Simile Classifiers for Face Verification.

Kumar, Berg, Belhumeur, Nayar. ICCV 2009.

Numerous more recent works on **activity**, **texture**, **3d models**, etc.

- Spatial layout: **large, enclosed**
- Affordances / functions: **can fly, park, walk**
- Materials: **shiny, black, hard**
- Object presence: **has people, ships**
- Simile: **looks like Star Trek**
- Emotion: **scary, intimidating**

Space of Scenes

A scatter plot showing the relative positions of various scenes. The scenes are distributed across the space, with some appearing in clusters and others in isolation. The labels are: Ice Cave, Cavern, Forest, Dentist's Office, Classroom, Volcano, Savanna, Village, Beach, Subway, Highway, Fountain, Canyon, Railroad, Canal, and River.

Which Scene Attributes are Relevant?

Inspired by the “splitting” task of Oliva and Torralba and “ESP game” by von Ahn and Blum.

Which attributes distinguish the scenes on the *left* from the scenes on the *right*?

rock, warm, barren, natural |

Scene Attribute Labeling

When you mouse over one of the images, a larger version of that image will appear in the box below.

Click on the scenes below that contain the following lighting or material:

camping. *Either an actual camp site, or scene in wilderness suitable enough for humans to make a tent and/or sleep.*

Example Scene

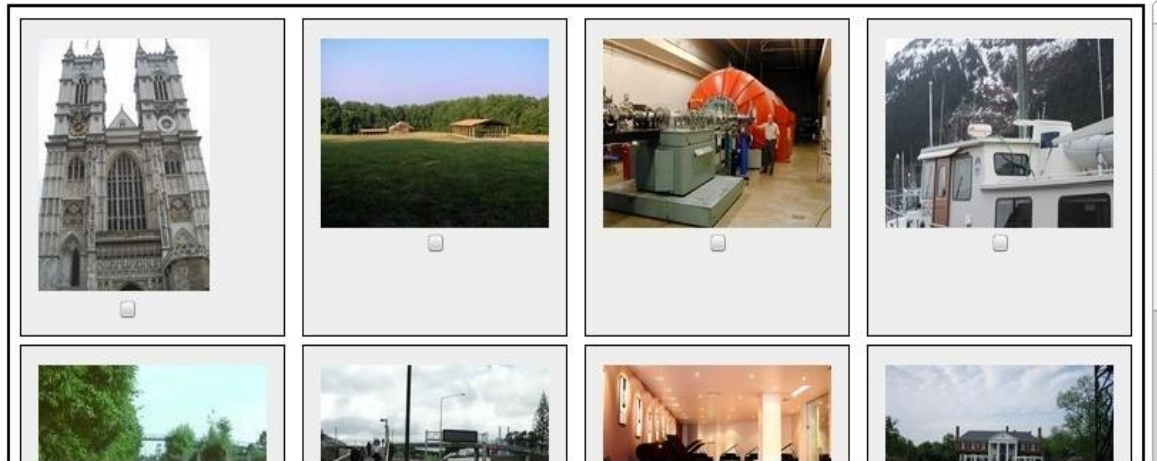

Example Scene

These HITs are reviewed before being approved or rejected.

[For futher instructions Click Here!](#)

This task can be very subjective. If you are not sure about which images should be selected, please ***SKIP THIS HIT*** or email us to ask for clarification. There are more HITs with less subjective attributes.

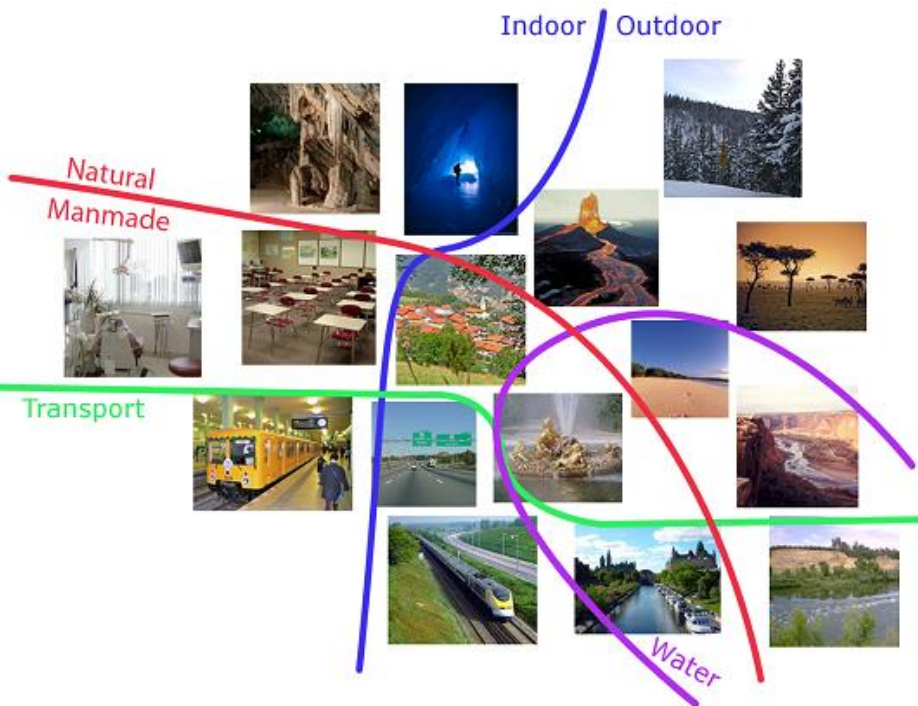

Images continued down the page ...

SUN Attributes: A Large-Scale Database of Scene Attributes

<http://www.cs.brown.edu/~gen/sunattributes.html>

Space of Scenes
Organized by Attributes

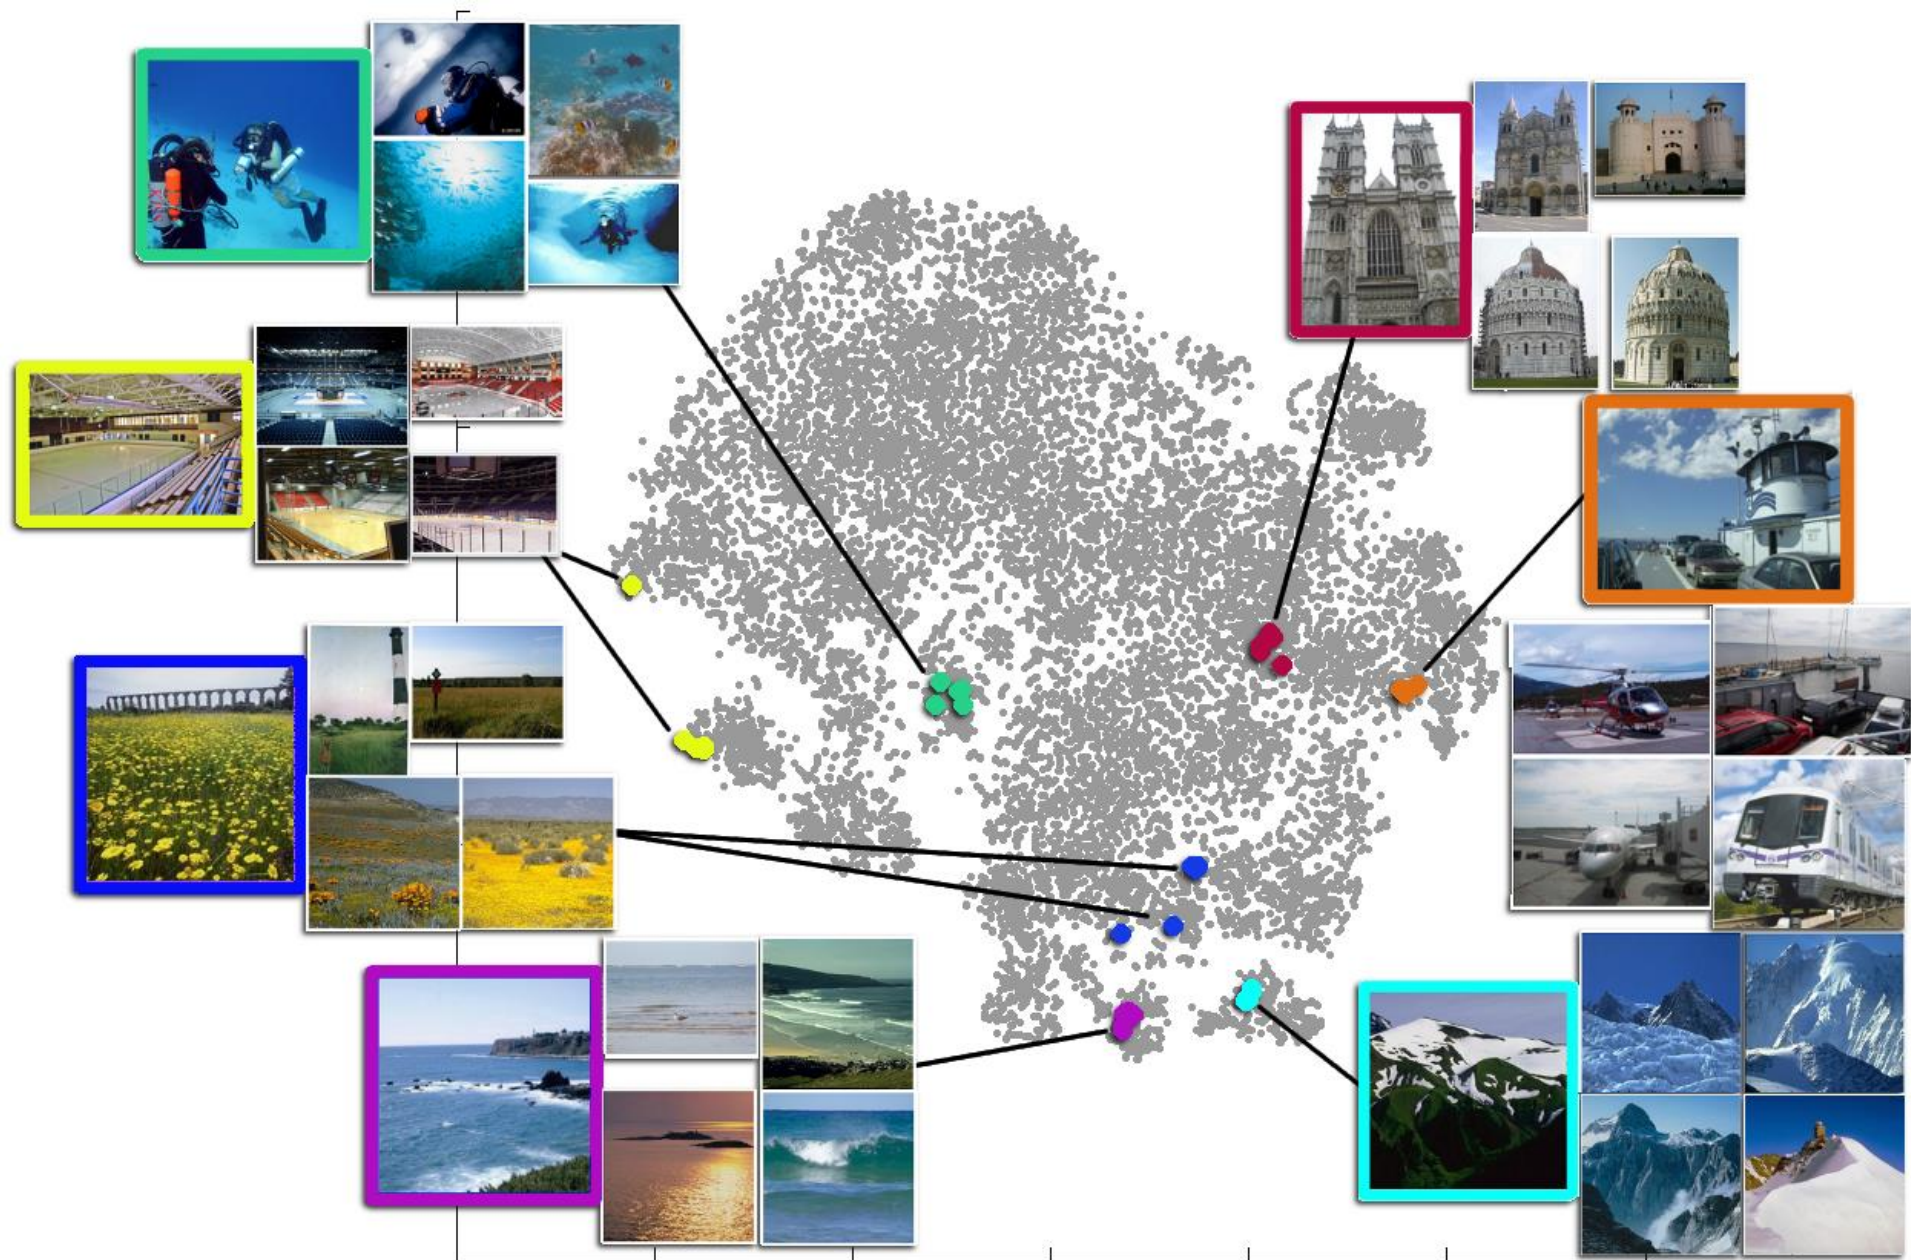

Global, binary attributes describing:

- Affordances / Functions (*e.g. farming, eating*)
- Materials (*e.g. carpet, running water*)
- Surface Properties (*e.g. aged, sterile*)
- Spatial Envelope (*e.g. enclosed, symmetrical*)

Statistics of database:

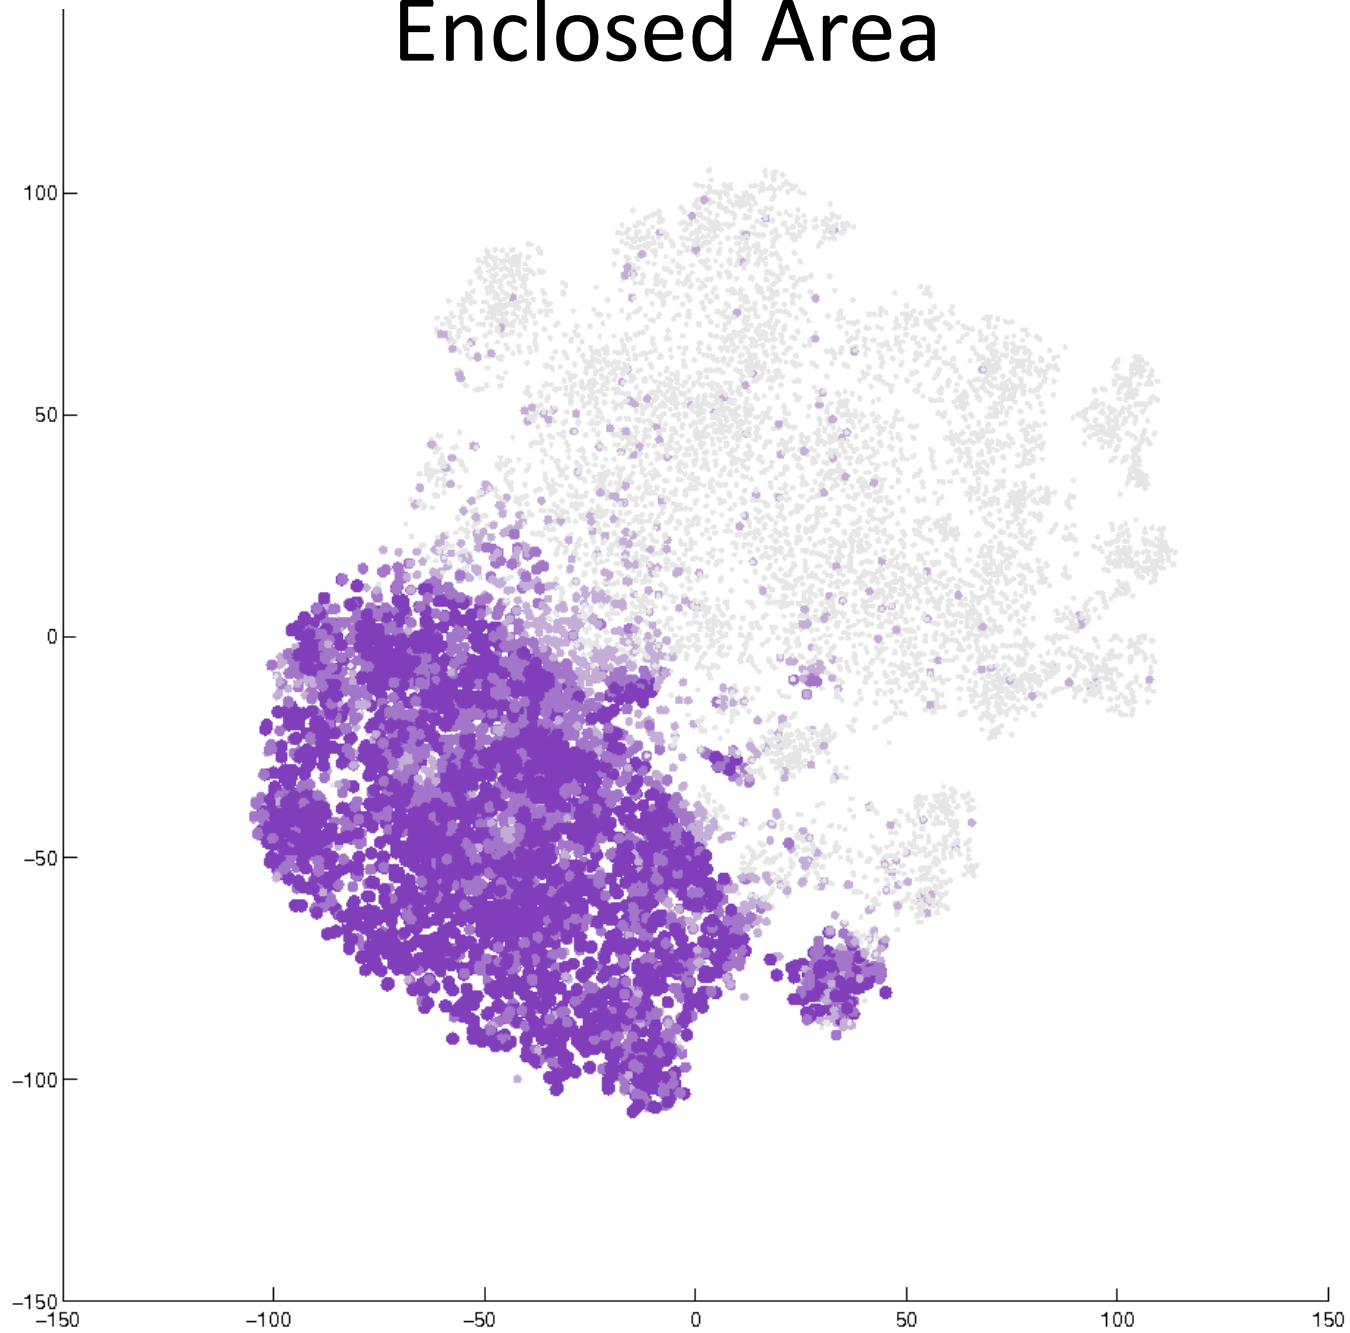

- 14,340 images from 717 scene categories
- 102 attributes
- 4 million+ labels
- good workers ~92% accurate
- pre-trained classifiers for download

Recap: Attributes and Crowdsourcing

- If you can only get one label per instance, maybe a categorical label is the most informative.
- But now that crowdsourcing exists, we can get enough training data to simultaneously reason about a multitude of object / scene properties (e.g. attributes).
- In general, there is a broadening of interesting recognition tasks.
- Zero-shot learning: model category with an attribute distribution only.
