

# Visualizing social media content with SentenTree

Mengdie Hu , Krist Wongsuphasawat , and John Stasko 

# Visualizing textual content

- Keywords
  - Text cloud, Wordle, semantic word cloud, parallel tag cloud, etc.
- Text structures
  - Word Tree, Double Tree, etc.
  - PhraseNet

Phrase net, Van Ham et al. 09

Word tree, Wattenberg and Viegas 08

# hey Jude

don't

make it bad

take a sad song and make it better

be afraid

you were made to go out and get her

let me down

you have found her, now go and get her

remember to

let her into your heart

let her under your skin

then you

can start

begin

to make it better

better better better better better waaaaa

na

Recurring segments collapsed and larger

Non-recurring segments aligned

# Design goals of SentenTree

- Highlight topics with keywords
- Show keywords in context
- Coverage and conciseness
  - Show fragments instead of full sentences
  - Remove stopwords and punctuations
  - Collapse common fragments
- Summary and Details
  - Show original context on demand
  - Enable drill-down

# SentenTree visualization demo

# Building a SentenTree vis

# Constructing frequent sequential patterns

- I love the World Cup!
- RT if you are watching the World Cup today!
- Marcelo opens the World Cup scoring with this own goal to give Croatia the Lead.
- The first goal of the World Cup is an own goal by Brazil!
- This is the best goal so far in the World Cup: Marcelo's own goal.

# Constructing frequent sequential patterns

- I love the **World Cup**!
- RT if you are watching the **World Cup** today!
- Marcelo opens the **World Cup** scoring with this **own goal** to give Croatia the Lead.
- The first **goal** of the **World Cup** is an **own goal** by Brazil!
- This is the best **goal** so far in the **World Cup**: Marcelo's **own goal**.

# Constructing frequent sequential patterns

- world cup (5)
- world cup own goal (3)
- goal world cup own goal (2)

# Constructing frequent sequential patterns

- world cup (5)
- world cup own goal (3)
- goal world cup own goal (2)

goal – world cup – own goal

# Force-directed layout with constraints

- Implemented with the CoLa package
  - <http://marv1.infotech.manash.edu/webcola/>
- Constraints:
  - Words in a pattern: left to right order
  - Bigrams: shorten edge, center words vertically
  - Child branches: center horizontally

# Performance

- Time cost
  - Pattern generation: linear to number of sentences in dataset
  - Graph layout: depends on complexity of graph
- Javascript implementation, Chrome browser, Macbook Air
- Test results:
  - 10k – 2 sec
  - 100k – 20 sec
  - 1M – 2 minutes

# Observations and initial feedback

# Natural content clustering

# Data analysts feedback

- Like
  - Frequent words “pop out” with frequency count
  - Context available through hovering
  - Similar content grouped together
  - Shows major topics
  - Less frequent content discoverable

# Data analysts feedback

- Learn
  - Same word appears multiple times
  - Drill down, search, etc.
- Suggest
  - Improve packing algorithm to remove whitespace
  - Reduce noise
    - Stemming and spell checks
    - Filters

Show more information: meta-info on user, sentiment, etc.

# Takeaway

- SentenTree is a novel visualization technique for social media text that both summarizes topics (through keywords) and shows context (through sentence fragments).

This research is supported in part by the DARPA XDATA program and the National Science Foundation via award IIS-1320537.

# SentenTree: Make TextVis great again

- SentenTree is a novel visualization technique for social media text that both summarizes topics (through keywords) and shows context (through sentence fragments).
