

Statistical Graphs & Charts

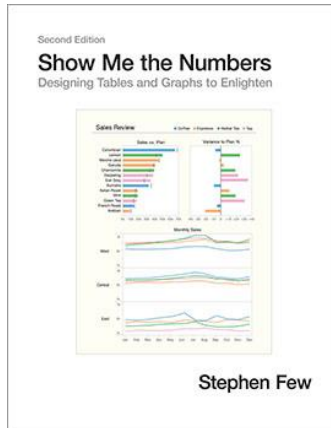

CS 4460 – Intro. to Information Visualization
August 30, 2017
John Stasko

Learning Objectives

- Learn different statistical data graphs
 - Line graph, Bar Graph, Scatterplot, Trellis, Crosstab, Stacked bars, Dotplot, Radar graph, Box plot, Pareto chart, Bump chart, Histogram, Frequency plot, Strip plot, Steam-and-leaf plot, Heatmap
- Learn type of data and analytic goal each technique best applies to
- Develop skill at choosing graph(s) to display different types of data and data sets
- Learn approaches to address overplotting
- Understand concept of “banking to 45°”
- Just get better at applying and using the standard charts

Few's Selection & Design Process

- Determine your message and identify your data
- Determine if a table, or graph, or both is needed to communicate your message
- Determine the best means to encode the values
- Determine where to display each variable
- Determine the best design for the remaining objects
 - Determine the range of the quantitative scale
 - If a legend is required, determine where to place it
 - Determine the best location for the quantitative scale
 - Determine if grid lines are required
 - Determine what descriptive text is needed
- Determine if particular data should be featured and how

Some
 examples...

Fall 2017

CS 4460

4

Let's See Some Examples

Vertical vs. Horizontal Bars

- Horizontal can be good if long labels or many items

Multiple Bars

- Can be used to encode another variable

Fall 2017

CS 4460

7

Upcoming Examples

- Page references are from *Now You See It*

Fall 2017

CS 4460

8

Add Reference Lines

p. 96

Fall 2017

CS 4460

9

More Reference Lines

p. 97

Fall 2017

CS 4460

10

Trellis Display

Typically varies on
one variable

Distribute different
values of that
variable across views

p. 100

Fall 2017

CS 4460

11

Crosstab

Varies across more
than one variable

p. 102

Fall 2017

CS 4460

12

Crosstab

p. 103

Fall 2017

CS 4460

13

Overplotting

Too many data points

p. 118

Fall 2017

CS 4460

14

Overplotting Solutions

- Reducing size of data objects
- Removing all fill color from data objects
- Changing the shape of data objects
- Jittering data objects
- Making data objects transparent
- Encoding the density of values
- Reducing the number of values
 - Aggregating the data
 - Filtering the data
 - Breaking the data into a series of separate graphs
 - Statistically sampling the data

Fall 2017

CS 4460

15

Time Series Data

- Patterns to be shown
 - Trend
 - Variability
 - Rate of change
 - Co-variation
 - Cycles
 - Exceptions

Fall 2017

CS 4460

16

Time Series Visualizations

- Effective visualization techniques include...

Fall 2017

CS 4460

17

Line Graphs

When to use:

When quantitative values change
during a continuous period of time

p. 151

Fall 2017

CS 4460

18

Bar Graphs

When to use:

When you want to support the comparison of individual values

p. 152

Fall 2017

CS 4460

19

Dot Plots

When to use:

When analyzing values that are spaced at irregular intervals of time

p. 153

Fall 2017

CS 4460

20

Radar Graphs

When to use:

When you want to represent data across the cyclical nature of time

Fall 2017

CS 4460

p. 154
21

Heatmaps

When to use:

When you want to display a large quantity of cyclical data (too much for radar)

Fall 2017

CS 4460

p. 157
22

Box Plots

When to use:

You want to show how values are distributed across a range and how that distribution changes over time

p. 157

Fall 2017

CS 4460

23

Animated Scatterplots

When to use:

To compare how two quantitative variables change over time

p. 159

Fall 2017

CS 4460

24

Banking to 45°

Same diagram, just drawn at different aspect ratios

People interpret the diagrams better when lines are around 45°, not too flat, not too steep

p. 171

Fall 2017

CS 4460

25

Question

Which is increasing at a faster rate, hardware sales or software sales?

Log scale shows this

Both at same rate, 10%

p. 172

Fall 2017

CS 4460

26

A Story

How much wine of different varieties is produced?

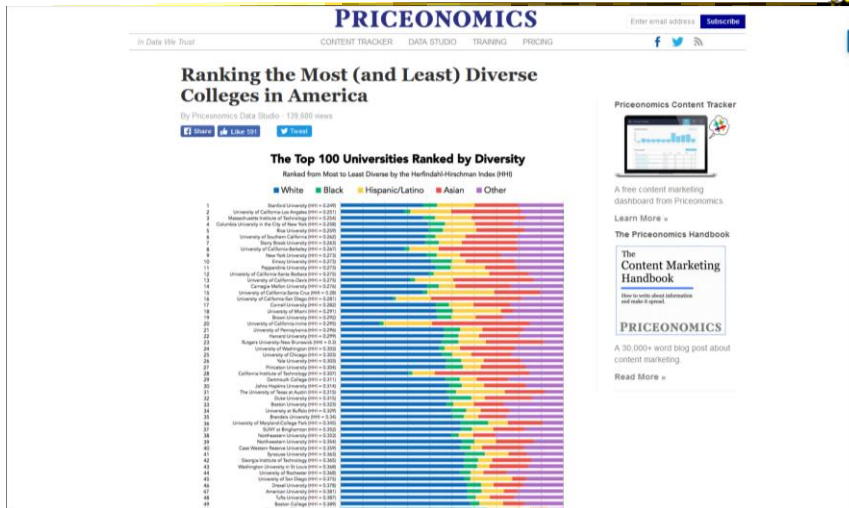

p. 191-2

Fall 2017

CS 4460

27

Stacked Bars

<https://priceonomics.com/ranking-the-most-and-least-diverse-colleges-in/>

Fall 2017

CS 4460

28

Pareto Chart

Shows individual contributors and increasing total

80/20 rule –
80% of effect
comes from 20%

p. 194

Fall 2017

CS 4460

29

Bump Chart

Shows how ranking relationships change over time

p. 201

Fall 2017

CS 4460

30

Deviation Analysis

Do you show the two values in question
or the difference of the two?

p. 203

Fall 2017

CS 4460

31

Distribution Analysis Views

- Histogram
- Frequency polygon
- Strip plot
- Stem-and-leaf plot

Fall 2017

CS 4460

32

Histogram

Fall 2017

CS 4460

p. 225

33

Frequency Plot

Fall 2017

CS 4460

p. 226

34

Strip Plot

p. 227

Fall 2017

CS 4460

35

Stem-and-leaf Plot

p. 228

Fall 2017

CS 4460

36

Comparisons

Note how first one's curve is smooth (not such a noticeable difference). Second one is more noticeable. Same data.

p. 234

Fall 2017

CS 4460

37

Correlation Analysis

Bleah. How can we clean this up?

p. 276

Fall 2017

CS 4460

38

Crosstab

p. 277

Fall 2017

CS 4460

39

Color Choice in Heatmaps

Argues that black should not be used as a middle value because of its saliency (visual prominence)

Some people are red-green color blind too

p. 285-7

Our 47 Weirdest Charts From 2015

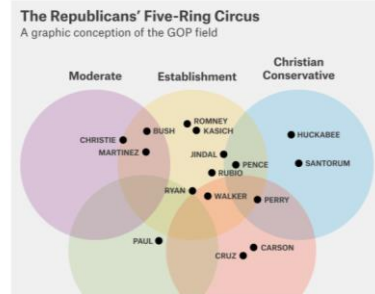

By [Andres Scheinman](#)

Filed under: [2015 Year In Review](#)

We made more than 1,500 charts in 2015 at FiveThirtyEight. Many were bar charts, line charts and scatterplots — but not all. Here are some of the more unusual graphics we published.

1.

44

HW 1

- Questions?
- Remember to bring two hardcopies on Friday

Fall 2017

CS 4460

45

Friday

- First lab of term
 - Prep: Read Murray 1st half chapter 3
 - Bring your laptop
 - Install the following on your laptop
 - sublime (or some other code editor/IDE)
 - Chrome (or some other browser)
 - python (if Mac or Linux, already there)
 - git clone or download starter code

Fall 2017

CS 4460

46

Upcoming

- Lab 1 – HTML, CSS, DOM
 - Prep: Murray, chapter 3 up to Javascript
- **No Class** – Labor Day
